# GLiP

## While you're on it, and after you stop.

An avatar-based self-care app for GLP-1 users

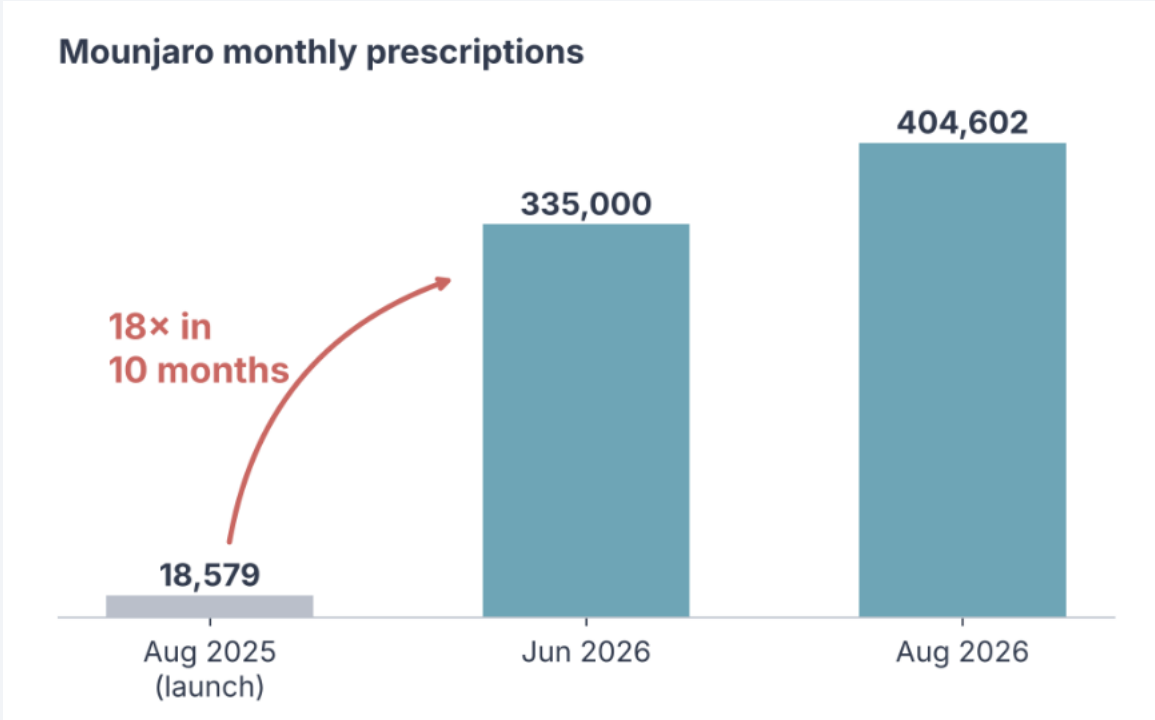

CEO - Seojin Kwon CTO-Minsung Park CPO- Goeun Yeh CTO- Hong Seyoon CMO- Daeun Lee

# Problem

**18x** In 10 months

-> Prescriptions exploding!

# Problem

**1/3**

**experience nausea**

->

**But.. only**

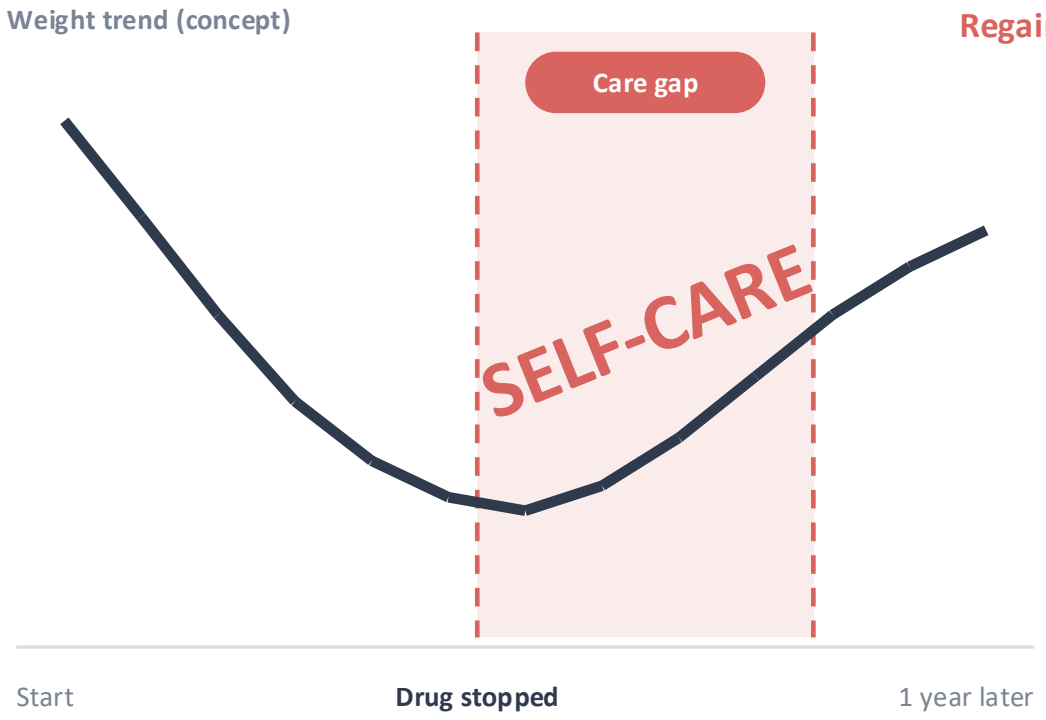

**4~7%**

**quit over side effects**

->

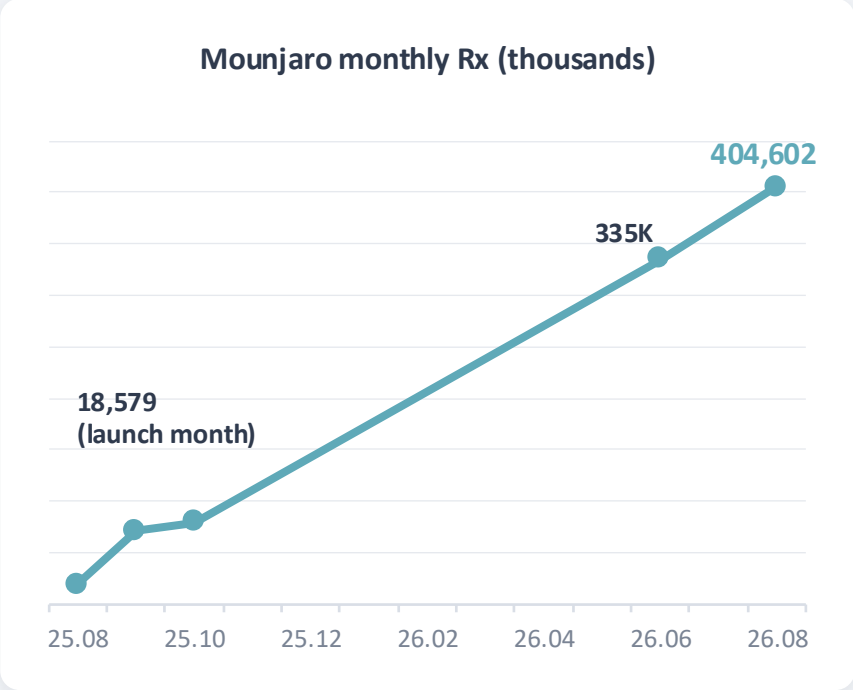

# Problem

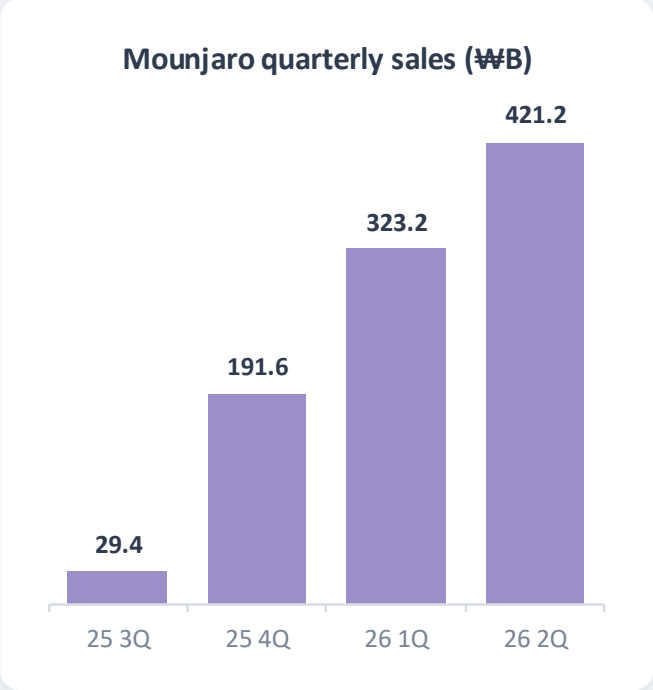

**82% regain weight**

**within 1 year of stopping Mounjaro.**

# Market up 22× in a year; policy moving to ‘post-Rx care’

**~22×**
Monthly Rx, 1 yr after launch

**₩534.2B**
Q2 '26 sales, both drugs

**~₩2.1T**
Annualized market

# Persona

**Someone else caring for me?**

**Caring for myself: *Self-Care***

On treatment

22, college student

**“Vomiting is just part of losing weight, right?”**

**GLIP**
Character wilts with vomiting or dehydration; instant alert on red flags

After stopping

42, office worker

**“My appetite is back… I'm scared I'll regain”**

**GLIP**
One meal photo + a weekly weight traffic light

Doctor · B2B

46, clinic owner

**“I have no way to see my patients' last 4 weeks”**

**GLIP**
4-week reports & red-light alerts from consenting patients

# GLP

# Main Ideas

## 1) Avatar-Mediated Self-Awareness

**No commands, no pressure: users notice for themselves.**

Mirrors distort body image, but a wilting character makes you think “I should take care of myself.”

Feedback and avatars are the most effective drivers of health behavior change.

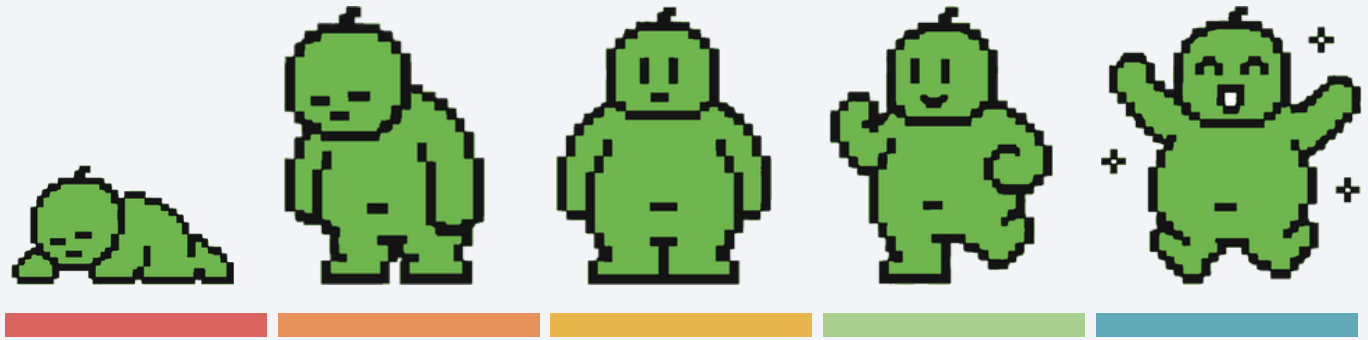

## 2) Patient Journey–Adaptive Care

**Needs change across the treatment journey, so care changes with them.**

- **On treatment:** side effects & nutrition → symptoms shape the character
- **After stopping:** appetite & weight regain → lifestyle and weight shape the traffic light

Alerts, meal guidance and character reactions adapt to each phase, so care continues from the first dose to after the last.

# Solution (On drug)

**Example · Vomiting, can't keep water down**

1. Tap the avatar's chest
2. Check ‘Vomiting more than usual’
3. Character asks 3 follow-up questions
4. **Level 4 → 3: tired face, wilted sprout**

**Character = Mirror**
How my body is right now (not a reward)

**Sprout = Reward**
Logging effort → decoration items

**Bad day? Logging earns the same sprouts.**
So users log honestly, hiding nothing.

# Solution(On drug)

**1 Start the 1-min daily heck**

"Anything bothering you today?" → Tap Start

**2 Pick what bothers you → details**

Stomach → "Vomiting more than usual"

**3 Character asks follow-ups**

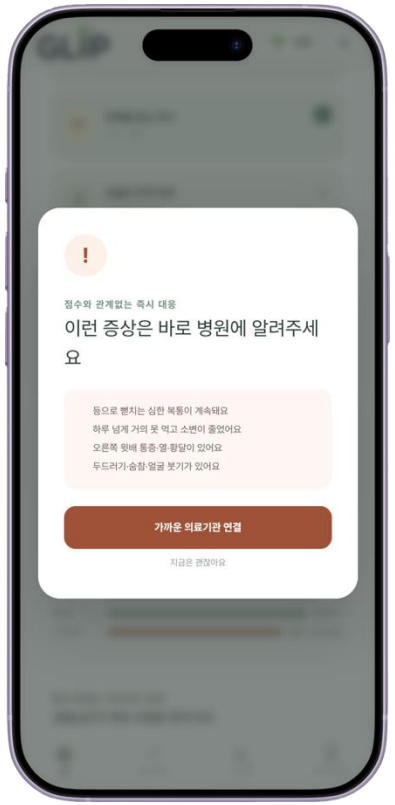

"Could you eat or drink?" → "Barely"

**4 Lively yesterday → tired today**

Level 4 → 3: tired face, wilted sprout

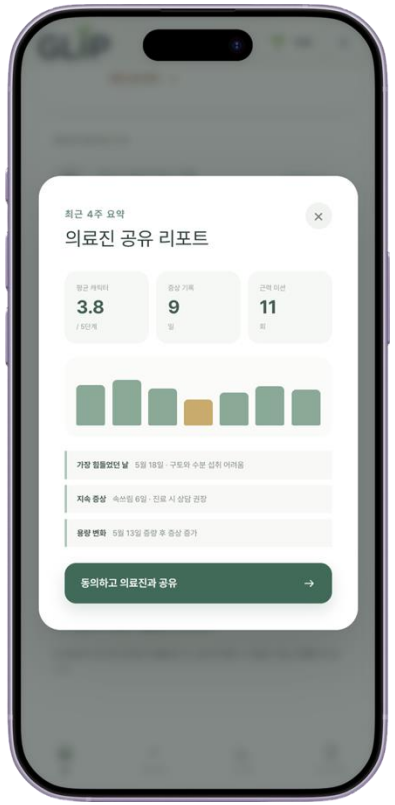

# Solution (On drug)

Red flags

## Instant alert, whatever the score

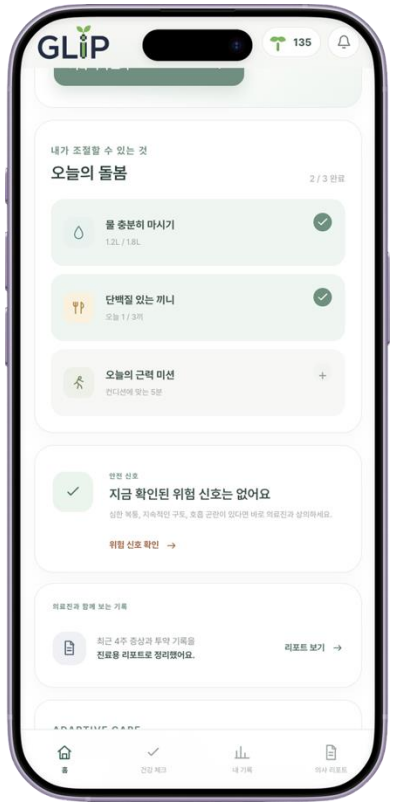

Any 1 of 5 red-flag symptoms → instant alert + link to nearby care

Clinic link

## 4-week report to the doctor

With consent: avg. character level, worst day, lasting symptoms, dose changes on one page

Daily care

## Start with what I can control

Water, protein & strength missions + today's safety signal

# Solution (Stopping drug)

**On treatment**

Main worry **seek health condition, poor nutrition**

What GLIP tracks

**Symptoms** → **Character state**

- 1-min symptom check · instant red-flag alerts
- Twice-daily checks in dose-up weeks

**Drug stopped!**

= Turning point

**After stopping · 52 wks**

Main worry **appetite & weight regain**

What GLIP tracks

**Lifestyle** → **Character state**

**Weight** → **Traffic light**

- Meal photo → AI nutrition tags · 52-wk, 4-stage coaching

# Solution (Off drug)

Share of the ‘lost weight’ that the weekly average has regained

## Green

Under 25%

**→ Keep up maintenance**

## Yellow

25–50%, or
> 0.8 kg gained in the past month

**→ ‘2-week reset’ — daily weighing, meal templates, coaching 2×/wk**

## Red

50% or more, or
yellow for 4 weeks straight

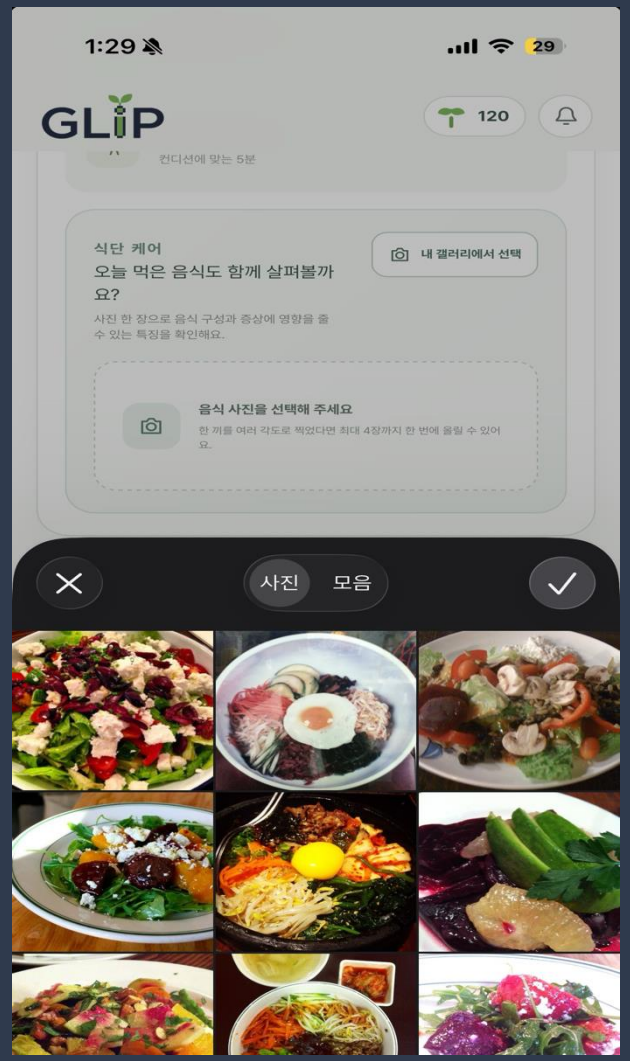

**→ Advise a doctor visit + send report to clinic**

**Before it turns red, we catch it at yellow.**

Evidence: 25%·50% [10] Horn 2025, [20] SURMOUNT-MAINTAIN · 0.8 kg [9] BMJ 2026 · traffic light [25] STOP Regain

GLiP

# Solution (Off drug)

## Lifestyle Tracking

Meal photos

⇒ AI identifies

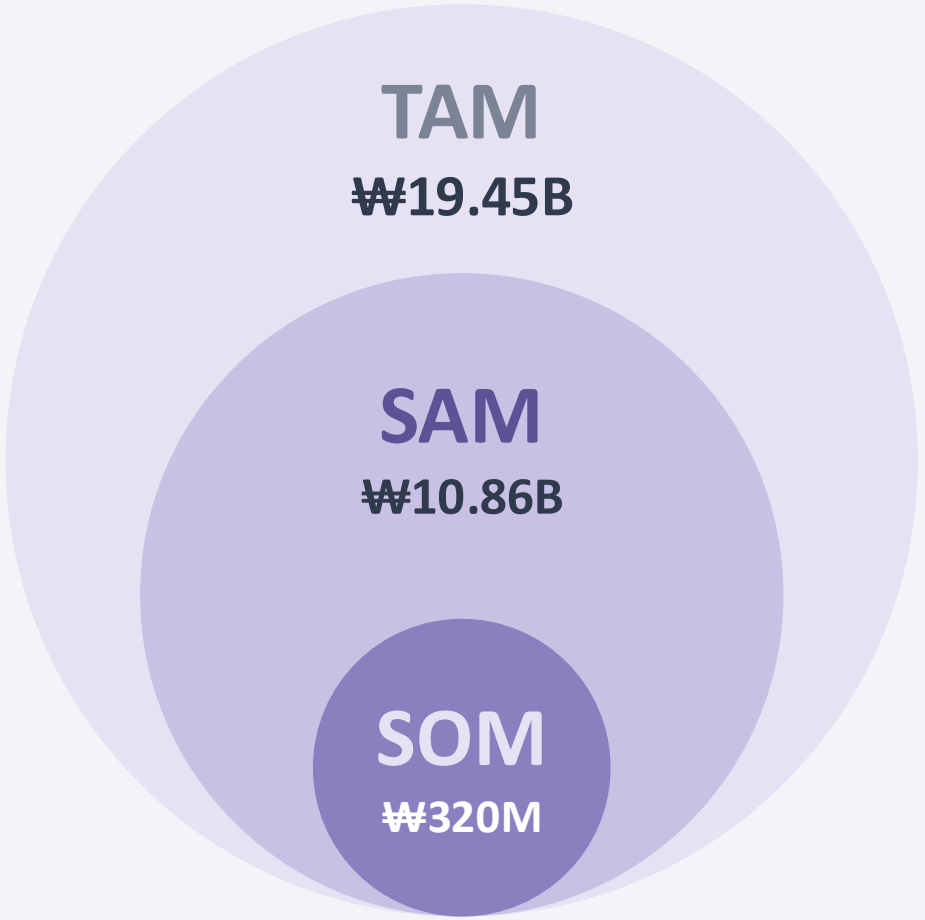

protein, vegetables, and refined carbohydrates

GLIP

# Comparison

| | Noom GLP-1 | Novo Fit Care | Ppiyak | Pillyze | GLIP |
|---|---|---|---|---|---|
| GLP-1 dose log & reminders | ○ | ○ | ○ | ✕ | ○ |
| Brand-agnostic (Wegovy + Mounjaro) | ○ | ✕ | ○ | ✕ | ○ |
| Seek health condition red-flag triage | △ | △ | ✕ | ✕ | ○ |
| Character-based motivation | ✕ | ✕ | ✕ | △ | ○ |
| Post-discontinuation care | ○ US only | ✕ | ✕ | ✕ | ○ |
| Korean clinic reports & reconnection | △ | ✕ | ✕ | ✕ | ○ |

# Go to Market – TAM-SAM-SOM Framework

**TAM** **₩19.45B / yr**

1.12M patients on treatment or stopped within the past year
+ 16,047 clinics supplied with GLP-1 obesity drugs

**SAM** **₩10.86B / yr**

First sales region, Seoul Capital Area — 739K patients (65.8%), 8,922 clinics (55.6%)

**SOM** **₩320M / yr (Year 3)**

268 paying clinics (3% of capital-area clinics), 5,619 of their patients enrolled

# Clinics pay — ₩3,300 per patient per month

**Patients · B2C**

All health features free
Only premium cosmetics are paid

Consented records

GLiP

Summaries & charting

**Clinics · core B2B**

4-week reports & red-light dashboard
Flat ₩99K per clinic per month

## 98%

**of revenue from clinics**

Cosmetics ≈ 2% — less a revenue line, more a 'keep-using' hook

## ₩99K / mo

**Flat fee per clinic (base)**

No per-referral fees, so we avoid patient-inducement/brokering issues

## < 1%

**of drug cost per patient**

~30 treated patients per clinic
→ ₩3,300 per patient / mo

# Further plan

1

**0–3 mo** — **MVP · user validation**

Measure 4-week check retention, red flag → clinic-guide click rate

2

**3–6 mo** — **Free pilot at 5–10 capital-area clinics**

Measure report open rate, visit-time change, willingness to pay

3

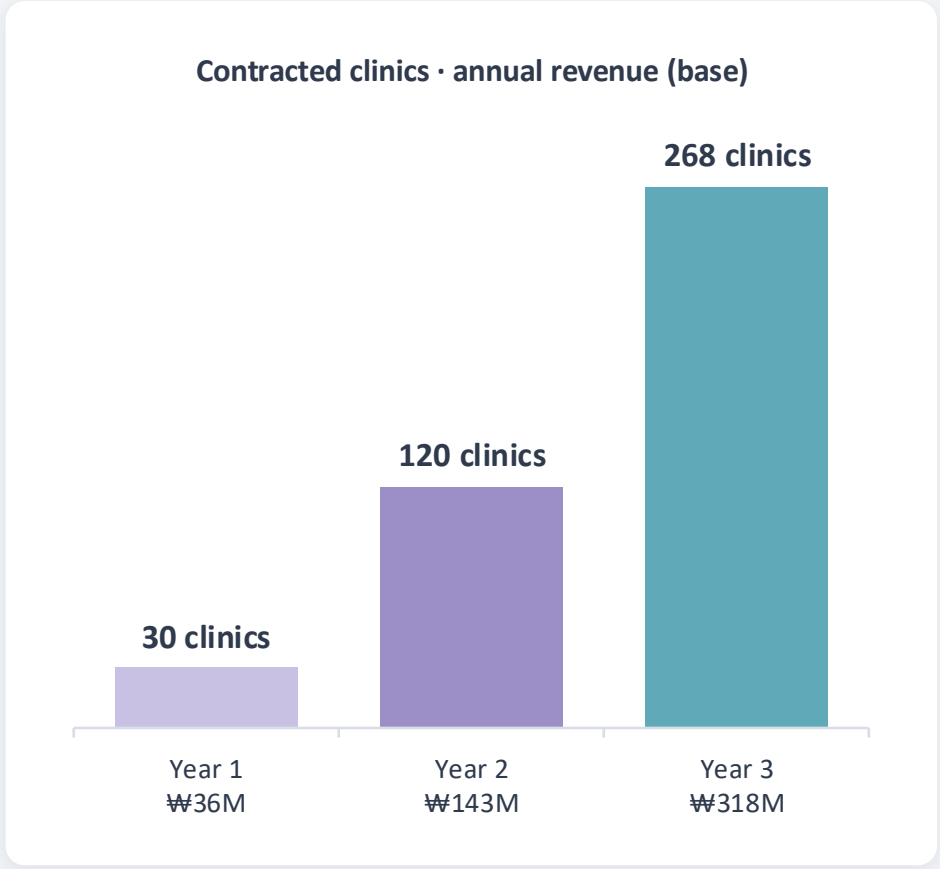

**6–12 mo** — **Paid conversion · 30 clinics in Year 1**

Measure 52-wk retention, yellow → green rate · telemedicine link

4

**12–36 mo** — **Data-driven scale-up · 268 clinics**

Measure regain-risk model validation · oral GLP-1 · regional rollout
